

An in-home child care application is to assure that the drinking water supply is safe and the septic system is functioning properly.

Initial Review for your Septic System and Drinking Water

1. Call the Environmental Health Division at (253) 798-4788 Operation & Maintenance Line. Leave a message stating that you want to apply for an in-home child care review. Leave your name, property address, and phone number. We will search for your septic system records and may call you for additional information to determine the capacity of your septic system.
2. An application packet with a checklist will be mailed to you if it is determined that your septic system can support additional use as an in-home child care. You will need to contact our Drinking Water Program at (253) 798-5216 to ensure water supply approval.
3. After your application and fee have been submitted, a member of our field staff will visit your property to review the septic system. You do not need to uncover any parts of your septic system for our review.
4. Upon successful review of your application the Health Department will issue a report indicating required Operation & Maintenance (O&M) inspection frequency and any further requirements. To keep your license active with Health Department your system must be inspected either annually or every three years depending on system type.

Renewal Process

We will send you a notification letter reminding you that an inspection of your system by a certified O&M firm is due. The O&M firm will include the Health Department fee as part of their bill.

The notification letter will also ask for the number of residents and the number of child care children in your home. When we receive this information we will reevaluate your system capacity. As part of our process we will locate the inspection report at www.onlineRME.com. We will issue a report renewing your in-home child care approval. You can provide this report to your licensor. If we have questions or need more information we will call you.

In-Home Child Care Application

O&M Number (office use only) _____ SR Number (office use only) _____

Applicant Name _____

Business Name _____

Site Address _____

City _____ State _____ Zip _____

Phone _____ Fax _____

Email _____
