Frank DiBiase, TPCHD Division Director, Environmental Health

From: Michael P. Slevin, III, P.E., Environmental Services Director

Subject: South Tacoma Groundwater Protection District Infiltration Policy

Date: January 9, 2017

Background: The City of Tacoma and Tacoma-Pierce County Health Department (TPCHD) are updating the guidance document Implementation of Stormwater Infiltration for Pollution Generating Surfaces in the South Tacoma Groundwater Protection District dated January 21, 2011 to reflect the current practices of Tacoma Municipal Code (TMC) 13.09 South Tacoma Groundwater Protection District (STGPD), specifically Section 13.09.070, Stormwater Infiltration. TMC 13.09.070 regulates the use of all infiltration facilities in the STGPD. Table 1 below was created to provide the circumstances and requirements for the approval of infiltration facilities that manage pollution generating stormwater runoff in the STGPD.

Non-Pollution Generating Surfaces: Infiltration of runoff from non-pollution generating hard or pervious surfaces is not restricted in the STGPD and will continue to be regulated per the requirements of the Stormwater Management Manual (SWMM).

Operation and Maintenance: Stormwater facilities installed in the City of Tacoma are required to be maintained per requirements of the SWMM on a regular and ongoing basis to ensure facility function is maintained. Unmaintained infiltration systems or an unacceptable change in operations may result in enforcement actions per TMC 13.09.

Ongoing maintenance activities for each facility are outlined in the facility specific Operation and Maintenance (O&M) Manuals and performed by the owners of the facility, or their designee. Written or electronic maintenance records must be available for review during inspections by either City of Tacoma or TPCHD staff.

In order to promote proper inspection and maintenance, each private stormwater facility will be required to have a Covenant and Easement (C&E) agreement with the City of Tacoma, which will be recorded to the title of the parcel through the Pierce County auditor. The C&E agreement outlines that a facility is present, that the owner is responsible to maintain the facility and that the City of Tacoma may enter the parcel to inspect, and if necessary, maintain the system.

Ongoing public education to promote best management practices and required maintenance of infiltration systems will be provided by TPCHD through STGPD inspections and City of Tacoma Environmental Services through facility inspections.

Application: Permit applicants who propose to install stormwater infiltration facilities in the STGPD may be required to submit an STGPD application and pay all associated fees. Applicants shall provide design submittals, O&M manuals, Monitoring Plans with associated Quality Assurance Project Plans and C&E agreements for review and approval as outlined in Table 1. Annual permitting is required for certain types of projects per Table 1.

Additional Considerations: Infiltration within the area of influence of underground contamination or contaminated sites regulated by EPA or another agency will not be allowed. Infiltration within the area of influence of drinking water wells may be allowed and may require additional studies and/or more stringent design criteria for the infiltration facility.
